LDARtools proudly presents: c2™

One of the exciting announcements we made at the recent National LDAR Symposium in Austin, Texas was the unveiling of the new LDARtools Bluetooth device: c2™.

A mere 3 ¼ inch c2™ is the next generation FECrystal™. Certified Class 1 Division 2. FCC ID # T9J-RN41.

c2™ is the ultimate Bluetooth device based on our current FECrystal™ 6000 design - A ruggedized and waterproof Bluetooth transmitter designed for continuous use with a Thermo / Foxboro TVA 1000B.

c2™ allows TVA readings to be wirelessly transmitted to a PDA or computer.

It also enables SKIBA to relight the TVA wirelessly. As you can tell it is smaller and lighter than FECrystal™ 6000. It also has more reliable components and, our tests indicate that it will perform better in "noisy" environments (this means process areas where there is more electronic interferences).

There was a way to do it better - and we found it.

phx21™ Coming Soon to StoreLDAR

6/22/09 is the expected Class 1 Division 1 Certification date for phx21™.

- Accepting orders June 23rd.
- Sept. 22nd first phx21™ orders shipped.

Don't wait to place your order as phx21's™ will be shipped on a first come / first served basis. Watch upcoming editions of the e-newsletter for more details.

Comments about FEInspect™

"The thing that I enjoy about the FEInspect™ software is that it allows a Technician to focus more on the duties and responsibilities of a Technician, and not so much on equipment specialist hands-on training and problem solving.

Where we used spend time trying to figure out why something happened, FEInspect™ spends time making things happen and ultimately helping us to stay in compliance and ahead of schedule.

I was once told that the difference between a good mechanic and a great mechanic is the tools that they work with . . . FEInspect™ is a great tool to work with if you're trying to get the job done and done right."

Alvin Woods

Sterlington, LA

NOTE: FEInspect™ is a software product that enables anyone using a FECrystal™ 6000 to perform mobile LDAR data collection. This product features a user friendly interface that can be easily viewed in all weather conditions, and provides the user with enhanced route filtering and tag location functionality. In addition, FEInspect™ ensures that all components are monitored for the required inspection time resulting in zero response time failures.
